## Is MyoLift™ Non-Invasive Facial Therapy Right for Me?

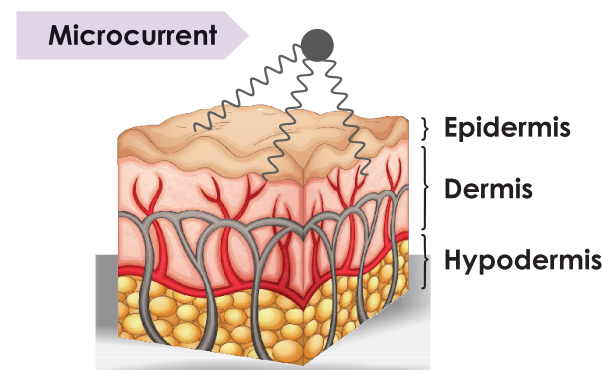

As the aging process progresses, most individuals begin to notice the signs of fine lines, wrinkles, loss of skin tone, jowls, drooping mouth corners, small lips, heavy eye syndrome & dry skin. MyoLift™ Non-Invasive Facial Therapy is a key factor in restoring the facial & neck anatomy back to a rejuvenated state.

## How Does MyoLift True Microcurrent Work for Lasting Results?

MyoLift™ True Microcurrent device delivers the exact amount of current needed to the target area of the face and neck to restructure the skin and degenerated muscle conditions.

The Microcurrent device sends mild electrical current to reactivate the cells to a healthier state. This communication restores the tissue, calms the inflammation, eliminates toxins, educates muscles by tightening, erases signs of fine lines, minimizes wrinkles and increases ATP production in cells (the building blocks for cellular reproductive energy).

## What are the Results of the MyoLift Non-Invasive Microcurrent Therapy?

A Plan of Treatment is prepared with a series of treatments to treat the specific needs of each client. The outcome is noticeable after the first session and vary to more progressive results with each treatment.
